REGISTERED NURSE
JOB DESCRIPTION

JOB SUMMARY:

The Field Registered Nurse who is in the case manager of the Home Health Team is responsible for the nursing care of the patients assigned to them and directs the Home Health Aides in quality patient care. The Field Registered Nurse is responsible for assessing patient and family needs in order to promote the best care the Home Health can give for recovery and rehabilitation.

JOB FUNCTIONS:

1. Knows the philosophies, purposes, policies and standards of the Home Health and their nursing Service department and provides for their explanation and implementation to the Home Health Aide. Be the case manager in all cases involving nursing and therapy care.
2. Assesses in depth upon the admission of the patient, the patient's physical and emotional status, level of competency, home environment, safety factors, family or household member's ability to assist with care and the need of the patient. These are incorporated into the admission notes. Conducts regular or OASIS assessments accurately, according to instructions in the OASIS Implementation Manual, and corresponding to documentation contained elsewhere in the assessment note.
3. Help formulates a patient care plan with the goals indicated and the means of implementing the correct procedures to attain these goals.
4. Records all clinical and progress notes and enters them into the patient's permanent record files. Be responsible for the clinical record for each patient receiving nursing care.
5. Weekly reviews the utilization and progress of the patient with the supervisor and attending physician as necessary.
6. Has knowledge of patient's condition at all times and informs the physician and/or the Nursing Supervisor immediately of any change in the patient's condition that warrants attention. Also observes, evaluates, and reports to the physician the patient's reaction to drugs or treatments, or there are deviations from the plan of care.
7. Interprets to the patient and family the expectations of the diagnosis and the nature of the treatment consistent with the action and wishes of the physician. Interprets to the social and physical factors in the environment that affect patient care.
8. Observe and evaluates potential danger of disabling conditions and indicates preventive and corrective measures.
9. Is responsible for the execution of the physician's orders and keeps the physician informed of all pertinent information concerning the patient's condition and response to treatment Gives skills of care to patients.
10. Extends paramedical services in carrying out the rehabilitative aspects of nursing care.
11. Obtains laboratory specimens when indicated per MD's orders.
12. Meets weekly with Nursing Supervisor for the purpose of discussing nursing care, policies, and future planning, and keeps the Supervisor informed of all pertinent information concerning patients and the Home Health Aides.
13. Assists the Nursing Supervisor in surveying, analyzing, and determining staff requirements for her assigned patients.
14. Coordinates treatment with Paramedical personnel.
15. Makes supervisory visits to all assigned Home Health Aides no less than once every two weeks.
16. Helps the family accept responsibility for providing care. Teaches and supervises family members regarding care of the patient.
17. Assumes the responsibility for orientation of new personnel and participates in inservice training programs.
18. Schedules her daily itinerary primarily based the Priority of care needed, length of time visits will require, proximity to other patients to be visited and other related factors.

19. A weekly itinerary is to be projected for regularly scheduled visits, allowing time for new admissions, emergency cases, and Home Health Aide introduction.

20. Must advise the office of any itinerary changes and where she can be contacted at all times while in the field. She should call the office between 9.00/10.00 a.m. or 2.00/4.00 p.m. each day.

21. Responsible for the certification and recertification of the Plan of Care.

22. May assign selected portions of patient care to licensed practical nurses and home health aides, but always retains the full responsibility for the care given and for making supervisory visits to the patient's home.

23. Performs other related duties as assigned by the Administrator.

24. Assure that progress reports are made to the physician for patients receiving nursing services when the patient's condition changes or there are deviations from the Plan of Care.

25. Ensure HIPAA guidelines and procedures are maintained.

PHYSICAL REQUIREMENTS:

1. Able to speak, read and write in English.
2. Able read assignments, follow directions,
3. Able to communicate and respond clearly on telephone and respond to patient's spoken needs.
4. The ability to physically transfer, lift or assist patients whose average weight is 160 pounds with or without the aid of mechanical devices.
5. Able to spend 80% of the work standing and/or moving about.
6. Able to walk, climb stairs, stoop, twist, bend and squat to perform essential job functions.

MENTAL REQUIREMENTS:

1. Able to concentrate on detail with frequent interruptions.
2. Able to follow, complete and remember daily routines and requirements.
3. Able to comprehend and utilize professional education materials.
4. Able to cope with the mental and emotional stress of the position.

QUALIFICATIONS:

1. A graduate of an accredited School of Nursing and be licensed in the state of Florida.
2. Complete knowledge of nursing principles and procedures of skills in the technique of good patient care.
3. Good mental health and the quality of retaining emotional stability in situations of varying circumstances.
4. Minimum of one year experience, preferable in community health.
5. Meets the physical and health requirements of the Home Health.

RESPONSIBLE TO: Director of Nursing / Administrator

PRE EMPLOYMENT NURSING EXAMINATION Employee Name:

Position:

Mr. Goldsmith, is 85 years old, suffered a cerebral vascular accident. His only neurological deficit is left hemiplegia. In the past, he was able to tolerate soft foods without difficulty, but since his discharge from the hospital he experiences trouble swallowing and chokes on food. Afraid of choking, he refuses to eat resulting in a ten (10) pound weight loss in one (1) month. The physician orders insertion of a N.G.T. giving osmolite 240 cc full strength, followed by 50 cc water q.i.d.

1. The nurse prepares Mr. Goldsmith for N.G.T. insertion by sitting him upright in a chair. Determination of how far to insert the tube should be made by:

- Looking for markers on the Tubing and placing fingerprints at the selected site.
- asking Mr. Goldsmith to hold the tube at the selected marker.
- using the tube to measure from the nose to xiphoid and visualize noting the area on the tube?
- Using the tube to measure from the ear to the nose and from the nose to the xiphoid and marking the tube with tape.

2. After successful insertion of the N.G.T., the nurse secures the tube to Mr. Goldsmith's nose and instills the first feeding. His son asks if his father could have this feeding lying down. Which of the following would be an appropriate response for the nurse to make?

- "The lying-down position would promote absorption of the feeding."
- "The lying-down position may promote vomiting and aspiration."
- "The lying-down position would facilitate breathing."
- "The lying-down position may be used when feeding are given during the night."

3. The term cachexia is used to denote which of the following conditions?

- Metastases of malignant neoplasms to distant structures.
- The slow, altered gait of the aged.
- The progressive malnutrition, weight loss, and emaciation that occurs with advanced burns.
- The crusting scar tissue of severe burns.

4. With the significant changes that have occurred in oncology, resulting in a prolonged life span and potential for increased quality of life an integral segment of cancer care must be directed at:

- The hospice concept.
- Psycho social issues.
- Rehabilitation
- Nutritional support.

Mr. Palmer, 66 years old, was discharged with terminal cancer from the hospital in compliance with his wishes of "go to home to die". His wife is assisting in his care. Mr. Palmer is confined to a hospital bed and drifts off to sleep at frequent intervals. He has little appetite and must be coaxed to eat.

5. Which of the following would be an appropriate nursing diagnosis for this client:

- Terminal cancer.
- Alternation in coping mechanisms.
- Weakness.
- Self-care deficit related to weakness.

Dawn T, a 32-year-old housewife with the diagnosis of multiple sclerosis, is visited at home by the community health nurse.

6. Planning care for Ms. T. will be most strongly influenced by which of these physical assessment findings:

- Vital signs.
- The presence of cardiac arrhythmia.
- Motor strength and coordination.
- Progression of paralysis.

7. The main goals of nursing intervention for this client is to:

- Assist with activities of daily living.
- Keep her as independent and active as possible for as long as you can.
- Prevent secondary infection.
- Teach and encourage her to eat food that is low in fat and gluten-free.

Seventy-eight-year-old John H. has been having difficulty with his memory and in carrying out some activities of daily life. He is diagnosed as having Alzheimer's disease. Mr. H. lives with his son and daughter-in-law.

8. The clinical diagnosis of Alzheimer's disease is:

- Based on psychiatric assessment.
- Determined by genetic history.
- Depends on the results of brain ct.
- Presumptive.

9. You are visiting your new client today Claire. She has a diagnosis of psoriasis. When you examine her lesions, you expect to find:

- a. Erythematous, sharply circumscribed plaques covered by silvery scaled.
- b. vesicopustules on an erythematous base.
- c. symmetrical macular, pure-white lesions.
- d. red, scaling eruptions in areas of concentrated sebaceous glands.

10. The nursing diagnosis most commonly related to dysfunction of the integumentary system is:

- a. skin integrity, actual or potential impairment of.
- b. self concept, disturbance in.
- c. comfort, alteration in.
- d. fluid volume, deficit, actual or potential.

Karen is a 7th day postoperative hysterectomy client; she has been receiving Penicillin Acq. K 500mg. BID In assisting her with her personal care, you notice urticaria, or hives, on her back and buttocks.

11. Your prime nursing action at this time is to:

- a. Apply antipruritic lotion, such as calamine.
- b. Apply tepid or cool compresses to the areas.
- c. Discontinue the penicillin.
- d. Hold the next dose of penicillin and contact the attending physician.

12. In assessing Mrs. Lacombe responses, it is important for the nurse to remember that compared with the general population, the elderly take:

- a. Fewer medications.
- b. More medications, but have fewer side effects.
- c. More medications and have more side effects.
- d. About the same medications.

13. In assessing Mrs. Lacombe potential for drug-toxicity, which of the following should the nurse keep in mind?

- a. The elderly require higher medication doses than the general population.
- b. The elderly develops symptoms more insidiously than the general population.
- c. The elderly develops symptoms more rapidly than the general populations.
- d. The elderly require fewer medications than the general population.

14. MSO 3 mg. IM q 3-4 hrs. is prescribed for a client experiencing severe chest pain. The vial comes as 5 mg./ml., which of the following doses would the nurse administer?

- a. 0.6 ml.
- b. 0.7 ml.
- c. 0.42 ml.
- d. 2.6 ml.

Mrs. Blanco was discharged from the ENT unit with a diagnosis of Meniere's syndrome. The nurse begins to visit this client for follow up care.

15. Meniere's syndrome is a disorder of the:

- a. Inner ear.
- b. Middle ear.
- c. External ear.
- d. Eustachian tube.
